

RAPTURE HEX HEAVYLIFT

RVRD's Flagship Ultra Heavy Lift Drone

The RVRD Rapture Hex is our latest Transport Canada SFOC approved Ultra Heavy-Lift drone. Built for demanding productions, the Hex has a maximum lift capacity of 105lbs, which is double the normal legal weight, making the Hex the largest film drone currently in North America. This extra weight capacity allows for large 30lbs camera packages to be flown legally, like the Alexa Mini LF or Sony Venice 2 with Anamorphic Zooms, FIZ, Mattebox, and Rainspinner and for +20min flights.

The Rapture Hex safely operates in rain, snow, wind, in temperatures down to -20c and at elevations up to 12,000ft and has multiple safety redundancies.
