

CABLE CAMERAS

Horizontal and Vertical Cable Cameras

SEA TO SKY CABLE CAM is the ultimate cable cam system that can travel horizontal & vertical while carrying payload weight up to 200lbs with incredible speeds up to 55km/h and with a span that can cover up to 2,000ft! The system is remote operated with advanced gyro-stabilized heads providing smooth stable shots with any broadcast or cinema camera.

DACTYLCAM PRO CABLE CAM is a medium-lift system engineered for live broadcast, sports and entertainment providing a safe, smart and powerful solution capable of carrying a Movi XL package. The DCP can also operate vertically.

CADENCE is the smaller brother to the Dactylcam Pro, has the power to carry any handheld gimbal vertical and horizontally, can be operated manually or autonomously with end stops, acceleration, braking and active traction control.
